

# CAT<sup>®</sup> PREMIUM OIL

## Experience the Difference

### Diesel Engine Oil for Cat<sup>®</sup> Engines

Diesel Engine Oil for Cat<sup>®</sup> on-highway trucks, earthmoving, commercial, and marine diesel engines combines a high quality base stock with a proprietary, balanced additive system having a combination of metallic detergents, ashes dispersants and multi-purpose inhibitors. This oil assures superior control of oil thickening caused by soot buildup and high temperature oxidation, and provides outstanding resistance to varnish deposits and corrosion.

### Diesel Engine Oil Greatly Exceeds Industry Standards

The American Petroleum Institute (API) CK-4 category defines a minimum engine performance level for commercial engine oils. Many companies develop two types of oil: "fighting grade" and "premium". Generally, fighting grade oils just meet API CK-4 specifications, while premium oils exceed them. You need to make this distinction with your oil supplier when you make your decision to purchase oil. Cat diesel engine oil is a premium oil that greatly exceeds the minimum requirements of API CK-4.

# CAT® PREMIUM OIL

## Protect Your Investment

Foley's Fluid Analysis Lab operates as a Caterpillar Certified Full Service facility, utilizing the industry's latest technology to receive accurate results on virtually any make or model of equipment. With more than thirty years of experience, and more than 1,000 fluid samples processed daily, we have become your trusted service advisor and partner – even other Cat Dealers use our services!

Reduce unnecessary downtime and maximize productivity by making informed decisions regarding the health of your fleet. It's really as simple as purchasing a kit, extracting samples, and handing it off to us to do the rest of the work.

Come visit us today to see what our facility is capable of, visit our website, or give us a call. We'd love to work with you to help protect your investment.

## Success Stories

*Foley's Oil Lab was able to identify high soot levels in our D6T engine oil. We had recently changed to a different oil supplier and found out from asking them questions that the oil we were purchasing from them was "fighting grade" not "premium grade". We switched back to Cat engine oil and followed the recommendation from the Oil Lab to increase our service intervals. Taking these steps decreased the soot levels in our engine oil. This also saved us money because we had to do an early hour engine overhaul due to high soot wearing out the engine.*

*The 930G we use in our Recycling business showed a red sample with 40% fuel dilution. While changing out the fuel pump, Foley found a broken rocker and was able to install a reman engine before there was any damage to the block.*

*Our new 390HEX was showing some very concerning oil samples. Thanks to the Foley Oil Lab, we were able to identify the specific issue and troubleshoot with a Cat-certified Technician without taking our machine out of commission. Working with Foley, we scheduled an oil replacement and prevented a potentially catastrophic failure.*

*We weren't seeing as much power as we would like to from our machine. Trending oil samples showed that the engine was picking up a lot of soot and wear metals, so we decided to do a complete Certified Engine Rebuild to prevent a failure before our busy season picked up!*
